CRYPTOGRAM

MESSENGER

README · v0.20.33 · 22 OCTOBER 2026

The first crypto messenger

Cryptogram is a messenger where every message is a crypto transaction on the Solana blockchain. You write a message, confirm it with a tap of your hardware wallet, and it is delivered through the blockchain — not through a company's server.

Cryptogram fills the gap between ordinary messengers and quantum communication. In ordinary messengers your correspondence is kept on a server: it can be read, blocked, altered or even deleted — which makes it legally unreliable as evidence. Quantum links cost a fortune and exist only between a few points in a country. In Cryptogram every message is encrypted, signed by the sender and written to the Solana blockchain forever.

- **Encrypted.** Only you and the recipient can read the message: it is end-to-end encrypted. No phone, no e-mail — your wallet is your identity.
- **Unstoppable.** There is no central server that can be switched off or blocked.
- **Permanent.** Messages are stored on-chain and cannot be edited or deleted.

How it works

01
Write
Open the web app in your browser and type a message to a @username or a wallet address.

02
Sign
Tap your hardware wallet card on the phone to confirm. Your keys never leave the card.

03
Send
The message travels as a single blockchain transaction.

04
Read
The recipient's app picks it up from the blockchain and shows it in the chat.

Pricing — four paid services

MESSAGE
≈ $0.02
Up to ~600 Latin characters. Long ones go in up to 4 parts, +$0.01 per part: ~2,430 characters for ≈ $0.05 (fewer with Cyrillic or emoji).

REGISTRATION
$0.99
Once: your encryption keys, public key (certificate) on the blockchain. Free* with an invite from a Premium ★ member.

USERNAME
$9.99
Once, optional: a unique @username and your link app.cryptogram.chat/@name.

★ PREMIUM
$44.99
Once, forever (Telegram Premium: $44.99 a year): free* invites for friends, a free* username, messages for $0.01 — 50% of the price. Settings → Upgrade status.

* Excluding the Solana network fee — usually under 1 US¢.

What you need

- **A browser** — no installation required.
- **A Solana wallet** — best with **Tangem**: your keys stay on the card, every message is confirmed by a tap. Get **10% off** via the link in the app (Wallet tab). Solana is not enabled in Tangem by default: Tangem → Manage tokens → Solana. Phantom, Solflare, Trust Wallet and others work too.
- **A little SOL on the wallet** — for the one-time registration ($0.99, free* by invite) and a small fee per message.

Registration — once

- We create your encryption keys and publish your public key on the blockchain, so others can write to you. One time, $0.99 in SOL — free* with an invite link from a Premium ★ member.
- No personal data: no name, phone or e-mail.
- Receiving is free: only the sender confirms and pays for a message.
- Your contacts are stored in your browser, not on our side.

First version

- Web app in six languages, one-to-one chats, messages up to ~2,400 characters.
- Messages are signed by the sender's wallet — nobody can send on your behalf.
- Unlock with Face ID; the card is tapped once per message. New messages appear by themselves.
- **Personal link app.cryptogram.chat/@yourname** opens a chat with you — for your website, e-mail signature or channel.

> **Important:** messages are encrypted, but they stay on the blockchain forever. Who wrote to whom, and when, is visible to everyone; the text is not.

Cryptogram vs Telegram

	TELEGRAM	CRYPTOGRAM	
Personal data	Phone number required	No phone or e-mail — just a wallet	✓
Secret chats	Start only when the recipient is online; tied to one device	Always end-to-end, from any device	✓
Encryption	Keys held by Telegram; end-to-end only in secret chats	Always end-to-end: only the two of you can read it	✓
Evidence	Can be deleted for both sides or edited	Sender's signature, timestamp, immutable text	✓
Blocking	Servers and even VPNs get blocked	A blockchain cannot be blocked	✓
Outages	Has had outages and downtime	Distributed network, runs without servers	✓
Storage	On the company's servers	On a public blockchain, forever	✓
Ads & spam	Ads in channels, spam from strangers	Spam is uneconomic: every message costs	✓
Cost per message	Free	A small fee, paid by the sender	✗
Premium	Telegram Premium: $44.99 a year	Premium ★: $44.99 once, forever	✓

> **Built for business and legal use:** correspondence cannot be blocked, forged or deleted. Every message — timestamped, signed by the sender and immutable on the blockchain — can serve as evidence in court.

Roadmap

Web app → Encryption → Longer messages → Files & images → More wallets → Mobile apps

* Free: excluding the Solana network fee — usually under 1 US¢.
